

Epidemiologist / Data Scientist (m/f/d)

wanted from June 2024 at the Department of Infectious Diseases and Tropical Medicine.

Who we are: The Department of Infectious Diseases and Tropical Medicine at Heidelberg University Hospital has a clinical and research mandate. We are embedded in a university campus with a strong interdisciplinary health research focus (incl. the Heidelberg Institute for Global Health). We are a diverse and interdisciplinary team of people from around the globe, all passionate about Global health, focusing on applying various methods with the goal to develop, validate and implement novel diagnostic tests that reach people and get them to the right therapy (For further info on the team and research: www.denkglobaldx.org).

We need your expertise, passion and drive to support the team. The position is limited to 3 years with the intention to make it longer term. The position will be based in Heidelberg, Germany; partial remote work will be possible.

Job-ID: V000012675

Einsatzgebiet: Infektions- und Tropenmedizin

Einsatzort: Heidelberg

Startdatum: June 2024

Tätigkeitsbereich: Wissenschaft und Lehre

Anstellungsart: Vollzeit (100 %)

Veröffentlicht: 16.04.2024

Befristung: Befristet (36 months - extension is sought)

Vertrag: TV-L

Your Tasks

Responsibilities: As an Epidemiologist/ Data scientist, you will contribute to several ongoing projects in the team which require advanced data analysis. You will also be expected to lead methodologically on projects that focus on data analysis to develop new diagnostic prediction tools. There will be opportunities to develop your own ideas on projects and apply for funding.

Job responsibilities will include:

- Analyzing large data sets and developing prediction tools based on traditional structured database tools and “big data” approaches with a special focus on Bayesian analysis
- Designing, conducting, and interpreting statistical analysis, including analysis of cohort, cross-sectional and clinical studies
- Engaging with project collaborators, stakeholders and international organizations (incl. WHO) in large international projects

- Writing of manuscripts for publication and preparing scientific/project presentations (incl. travel for presentations)
- Supporting/ leading grant development activities
- Support/ supervision of junior researchers in designing and performing data analysis

Your Profile

- Master or PhD degree in (Bio-)Statistics, Mathematics, Computer Science, Epidemiology, or a related field
- Minimum 2 years of experience in data analyses using frequentist and Bayesian approaches. Experience in handling large data sets. Experience in machine learning techniques would be an asset
- Knowledge of infectious diseases. Knowledge of diagnostics research would be an asset
- Proficiency in coding and analysis using R, SAS, python, STATA or similar applications; ability to provide custom-designed reports and presentations of data
- Ability to work independently and on a result-oriented basis. Willingness to expand knowledge base and take on new topics. Effective communication.

We offer

- Possibility of mobile working
- Flexible working hours within the framework of flexitime
- Possibility of doctorate
- Collectively agreed remuneration, attractive company pension scheme (VBL)
- 30 days vacation
- Sustainable travel: job ticket
- Family-friendly working environment: cooperative arrangements for childcare, subsidy for child vacation care, advice for employees with relatives in need of care
- Wide range of health, prevention and sports offers
